

FL 200.12

Photoelastic material

Specification

Technical data

Plate

- LxWxH: 650x10x400mm
- material: Polycarbonate

Scope of delivery

1 plate

Description

From the photoelastic material, laboratory-specific models for the FL 200 experimental unit can be produced and investigated.

The photoelastic material (Polycarbonate) is available in plate form.

A carefully manufactured model plate can be used practically an unlimited number of times for qualitative demonstration purposes if handled properly.
